

Security and Loss Prevention Overhead Door Systems

Security Doors designed to stop pilferage and unwanted intruders through your sectional overhead and rolling steel door openings.

Secure distribution center, manufacturing plant, power plant, parking garage, jail, mezzanine opening, gated check points.

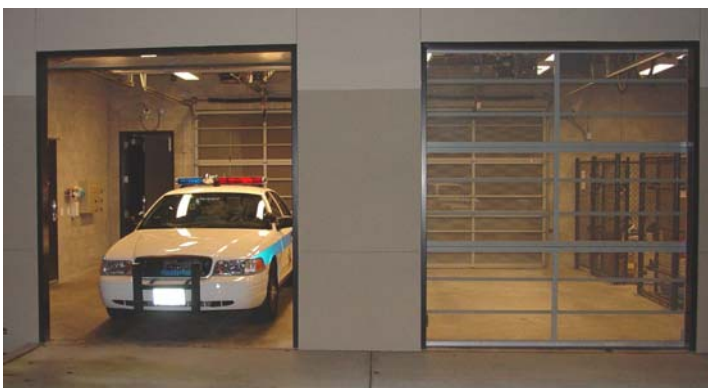

Ventilation * Visibility * Protection

Add as a secondary door to your existing overhead doors or as a complete system, the 900 series doors are as tough as they come.

Heavy duty door panels are constructed of steel tubes covered with 16 gauge by 1/2" diamond mesh with steel angles welded to the frame. The panels are powder coated with a durable finish.

Hardware for the 900 series doors is traditional overhead door hardware with formed plates to tie the security door system to the existing overhead door or optional diverter switch.

Doorways are the main route people and products move in and out of your facility.

Your overhead door openings offer the weakest link in maintaining your internal security system.

Open doorways used for ventilation lead to a loss of product and unwanted ingress and egress from your building.

Stop the loss and maintain the ventilation with the model 900 security door systems by Door Sales Incorporated.
